Content

1st Semester:

Module title:	**Mathematical Methods for Physics and Engineering I (5.04.618)**
Module code:	phy540
Course:	Mathematical Methods for Physics and Engineering I, lecture Mathematical Methods for Physics and Engineering I, exercise
Term:	Winter
Person in charge:	Dr. Uppenkamp
Lecturer:	Dr. Uppenkamp, Prof. Doclo
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 1st semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week Exercise: 2 hrs/week
Workload:	attendance: 84 hrs self study: 186 hrs
Credit points:	9
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	To obtain basic knowledge in application of mathematical methods to solve problems in physics and engineering
Content:	Vector algebra (vectors in 2- and 3-space, vector products, planes, lines, cylindrical and spherical coordinates) Preliminary calculus (elementary functions, limits, series, differentiation, integration) Preliminary complex analysis Introduction to ordinary differential equations Partial differentiation Vector calculus (scalar and vector fields, vector operators, line, surface and volume integrals, divergence and Stokes' theorem)
Assessment/type of examination:	Max. 3 hrs written exam or 45 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, computer presentation
Literature:	K. F. Riley, M. P. Hobson, S. J. Bence: Mathematical methods for physics and engineering. Third edition, 2006

Module title:	**Mechanics (5.04.612)**
Module code:	phy509
Course:	Mechanics, lecture Mechanics, exercise
Term:	Winter (Mechanics)
Person in charge:	Prof. Kühn
Lecturer:	Prof. Kühn
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 1st semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week Exercise: 2 hrs/week
Workload:	Attendance: 84 hrs Self study: 96 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Basic knowledge of mathematics acc. the pre-course of mathematics
Aim/learning outcomes:	Introduction into scientific reasoning; understanding the basic physical principles that govern physical behaviour in the real world, application of these principles to solve practical problems. General introduction to the fundamentals of experimental mechanics.
Content:	Scientific reasoning Space and Time Kinematics Dynamics Motion in accelerated frames Work and Energy Laws of Conservation Physics of rigid bodies Deformable bodies and fluid media Oscillations Waves
Assessment/type of examination:	weekly exercises, 2 hrs written exam or 45 min oral exam Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, Beamer presentation, experiments.
Literature:	*Mechanics:* D. Halliday, R. Resnick, J. Walker, S. W. Koch: Fundamentals of physics / Physik. Wiley-VCH, Weinheim, 2003 P. A. Tipler, G. Mosca, D. Pelte, M. Basler: Physics/Physik. Spektrum Akademischer Verlag, 2004 W. Demtröder: Experimentalphysik, Band 1: Mechanik und Wärme. Springer, Berlin, 2004 L. Bergmann, C. Schäfer, H. Gobrecht: Lehrbuch der Experimentalphysik, Band 1: Mechanik, Relativität, Wärme. De Gruyter, Berlin, 1998

Module title:	**Basic Engineering (5.04.641 & 5.04.634)**
Module code:	phy555
Course:	Production Engineering, lecture, winter semester Applied Mechanics, lecture, summer semester
Term:	Summer
Person in charge:	Prof. Dr. Lange
Lecturer:	Prof. Dr. Schmidt, Prof. Dr. Lange
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 1rd & 2th semester Bachelor Photonik
Teaching Methods/ semester periods per week:	Lecture with integrated sample problems and exercises / 4 hrs/week
Workload:	Attendance: 64 hrs Self study: 116 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Basic Math (Algebra, Derivation, Integration) Basic knowledge in Physics (Mechanics, Thermodynamics, esp. Heat transfer)
Aim/learning outcomes:	<u>Applied Mechanics:</u> Achieving basic knowledge in applied mechanics, especially in statics and elasticity theory <u>Production Engineering:</u> Achieving basic knowledge on how to produce objects with defined geometry and properties in an effective and economic way
Content:	<u>Applied Mechanics:</u> Static equilibrium (mainly 2D), frame works, friction (Coulomb), Hooke's law (3D including lateral contraction and thermal expansion), bending and torsion with planar cross sections, Mohr's theory <u>Production Engineering:</u> Overview on manufacturing technologies, like Casting and other primary shaping processes Plastic deformation processes Cutting and separating processes Joining processes Coating processes Changing material properties
Assessment/type of examination:	Written exam, 1hr.
Media:	Beamer, black board, electronic scripts
Literature:	<u>Applied Mechanics:</u> Assmann: Technische Mechanik (German); Meriam, Kraige: Engineering Mechanics, Beer, Russell, Johnston: Vector Mechanics for Engineers <u>Production Engineering:</u> Groover: Fundamentals of Modern Manufacturing DeGarmo: Materials and Processes in Manufacturing König: Fertigungsverfahren (in German)

Module title:	**Basic Laboratory (5.04.071 & 5.04.632)**
Module code:	phy513
Course:	Basic Laboratory Course I & II Communication & Presentation
Term:	Winter (course I, Oldenburg), summer (course II, Emden)
Person in charge:	PD Dr. Michael Krüger
Lecturer:	Krüger and others
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 1st semester & 2nd semester
Teaching Methods/ semester periods per week:	Laboratory: 2*3 hrs/week Communication and presentation: 2*1 hr/week
Workload:	attendance: 112 hrs self study: 158 hrs
Credit points:	9
Prerequisites acc. syllabus	
Recommended prerequisites:	- Simultaneous hearing of Mechanics & Electrodynamics and Optics lectures - Course I is a prerequisite for course I
Aim/learning outcomes:	Students will learn the basics of physical experimentation, the use of modern instrumentation, data collection, and analysis using appropriate hardware and software. They deepen lecture material through their own experiments. They acquire the skills for planning, implementation, evaluation, analysis, and reporting of physical experiments and presenting of results using multimedia tools. By working in groups, they gain competencies in the areas of teamwork and communication.
Content:	Introduction to software for scientific data analysis, analysis and assessment of measurement uncertainties, analysis and verification of measured data, fitting of functions to measured data, dealing with modern measurement techniques, carrying out experiments in the fields of mechanics, electricity, optics, nuclear radiation, electronics, signal acquisition, signal processing.
Assessment/type of examination:	Successful execution and record keeping of the experiments, presentation of the results in lectures.
Media:	English and German Script (see http://www.physik.uni-oldenburg.de/Docs/praktika/45392.html for first semester experiments and will be provided via Stud-IP for second semester experiments, blackboard, Beamer presentation
Literature:	see http://www.physik.uni-oldenburg.de/Docs/praktika/45394.html for the first semester and will be provided via Stud-IP for the second semester

Module title:	**Language – PB (13.01.22 & 13.01.027)**
Module code:	pb162
Course:	Language Course I and II (German)
Term:	Winter and Summer
Person in charge:	Dr. Engelhardt
Lecturer:	Sprachenzentrum
Language:	German
Location	Oldenburg
Curriculum allocation:	1st and 2nd semester B.Eng. Engineering Physics
Teaching Methods/ semester periods per week:	4 SWS per Semester
Workload:	attendance: 56 hrs per Semester self study: 42 hrs per Semester 2 intensive course (each 72 hrs)
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	The student can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g. very basic personal and family information, shopping, local geography, employment). He/She can communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters. She/he can describe in simple terms aspects of his/her background, immediate environment and matters in areas of immediate need. Other language courses are in accordance with the guidelines given by the "Sprachenzentrum"
Content:	• Reading • Writing • Listening • Speaking • Lecturing • Grammar in scientific papers
Assessment/type of examination:	Written and oral examination acc. requirements ("Sprachprüfung" in accordance with: *Common European Framework of Reference for Languages* **CEFR** : level A2)
Media:	Black board, PC, language laboratory
Literature:	Dallapiazza, von Jan, Schönherr, Tangram. Deutsch als Fremdsprache, Lehrerbuch 1A u. 1B, 1999

2nd Semester:

Module title:	**Mathematical Methods for Physics and Engineering II (5.04.616)**
Module code:	phy541
Course:	Mathematical Methods for Physics and Engineering II, lecture Mathematical Methods for Physics and Engineering II, exercise
Term:	Summer
Person in charge:	Prof. Doclo
Lecturer:	Prof. Doclo
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 2nd semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Exercise: 2 hrs/week
Workload:	attendance: 56 hrs self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Contents of the lecture "Mathematical Methods for Physics and Engineering I"
Aim/learning outcomes:	To obtain advanced knowledge in application of mathematical methods to solve problems in physics and engineering
Content:	Matrices and vector spaces (linear vector spaces, basis, norm, matrices, matrix operations, determinant, inverse matrix, eigenvalue decomposition) Quadratic forms Linear equations (Gauss elimination, least-squares solution) Functions of multiple variables (stationary points, constrained optimisation using Lagrange multipliers) Fourier series
Assessment/type of examination:	Max 3 hrs written exam or 45 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, computer presentation
Literature:	K. F. Riley, M. P. Hobson, S. J. Bence: Mathematical methods for physics and engineering. Third edition, 2006

Module title:	**Electrodynamics and optics (5.04.612)**
Module code:	phy520
Course:	Electrodynamics and optics, lecture
	Electrodynamics and optics, exercise
	Optical systems, lecture (with embedded exercise)
Term:	Summer
Person in charge:	Prof. van der Par
Lecturer:	Lienau, van de Par, Schellenberg
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 2nd semester
Teaching Methods/ semester periods per week:	Lecture: 6 hrs/week
	Exercise: 2 hrs/week
Workload:	Attendance 112 hrs
	Self study: 158 hrs
Credit points:	9
Prerequisites acc. syllabus	
Recommended prerequisites:	Mechanics
Aim/learning outcomes:	Electrodynamics and optics:
	Students will be able to understand the electric and magnetic phenomena and their treatment by an electromagnetic field including electromagnetic waves - with special emphasis on light.
	Optical systems:
	The students will learn the fundamentals of optics, with emphasis on applied optics. The students will be able to solve problems in optical metrology, illumination technology, Spectroscopy, Laser Technology and Microscopy in order to solve engineering questions. The students will be able to understand fundamentals of optical systems.
Content:	Electrodynamics and optics:
	Basics of Electrostatics
	Matter in an electric field
	The magnetic field
	Electrical circuits
	Motion of charges in electric and magnetic fields
	Magnetism in matter
	Induction
	Electromagnetic waves
	Light as electromagnetic wave
	Optical systems:
	Fundamentals of optics and theoretical models of light
	Ray optics, geometrical optics, validity range and applications
	Behaviour and properties of EM waves and applications
	Optical imaging
	Imaging construction elements
	Microscopy
	Colours
	Set-up and function of selected optical systems for illumination and metrology
	Optical Fibers

Assessment/type of examination:	3 hrs written exam or 30 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, Beamer presentation, experiments.
Literature:	Electrodynamics and optics: D. Meschede: Gerthsen, Physik. Springer, Berlin, 2005 (available in English) P. A. Tipler, G. Mosca, D. Pelte, M. Basler: Physik. Smith: Modern Optical Engineering, Mc Graw Hill, 4th edition, 2008 G. Schröder: Technische Optik, Vogel Verlag Würzburg, 2007 Skriptum

Module title:	**Electronics (5.04.642)**
Module code:	phy570
Course:	Electronics, lecture Electronics, practical and theoretical exercises
Term:	Summer
Person in charge:	Prof. Dr. Brückner
Lecturer:	Prof. Dr. Brückner
Language:	English
Location	Emden
Curriculum allocation:	Bachelor Engineering Physics, 2nd semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week Exercise/Practical Work: 1 week, block course
Workload:	Attendance: 70 hrs Self study: 110 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Basic Lab. I, Math. Methods for Physics and Engineering I
Aim/learning outcomes:	the students acquire basic competences to set-up and analyze digital and analog electronic circuits; furthermore basic knowledge for measurement methods as well as for handling measurement systems are imparted
Content:	logic functions and gates, digital circuit analysis and synthesis, flip-flops, digital counters and memories, A/D- and D/A converters, programmable logic devices , impedances, inductances and capacitances, complex alternating electric quantities, RCL-filter circuits, semiconductor circuits, rectifier circuits, operational amplifier circuits
Assessment/type of examination:	2 hrs written examination
Media:	Script, transparencies, blackboard, computer presentation
Literature:	Excerpts from lecture script Weddigen, Jüngst: Elektronik, Springer Verlag Böhmer: Elemente der angewandten Elektronik, Vieweg Verlag Hering, Bressler, Gutekunst: Elektronik für Ingenieure und Naturwissenschaftler, Springer Verlag, 2005 Hill: The Art of Electronics, Cambridge University Press, 1989

Module title:	**Specialization (5.04.620)**
Module code:	phy563
Course:	Introduction to "Engineering Physics", lecture, summer term Introduction to field of specialization, lecture, winter term
Term:	Winter and summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn, Prof. Kollmeier, Prof. Poppe
Lecturer:	Prof. Doclo, Prof. Neu, Prof. Kühn, Prof. Kollmeier, Prof. Poppe
Language:	English
Location	Oldenburg
Curriculum allocation:	Engineering Physics, 2nd semester & 3rd semester, compulsory
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	The students are enabled to establish an overview on principles and applications of engineering physics. The introduction to a specific field of specialization yields a basic knowledge on theoretical and experimental concepts and deepens on selected applications.
Content:	***Specialization***: *Laser and Optics:* Introduction to relevant research fields in Laser and Optics. Knowledge of the characteristics of waves, optical radiation, design und function of optical elements and instruments, basic design of photonic systems and optical metrology. *Biomedical Physics & Acoustics:* Overview of the research fields in Oldenburg related to biomedical physics and acoustics (acoustical signal processing, audiology, biomedical signal processing, neuro-sensory science and systems, medical radiation physics, medical imaging, noise control and vibration) *Renewable Energies:* Introduction into the areas of renewable energies, with special emphasis on energy conversion and utilization, based on complex physical models. The student will be able to understand the fundamental principles of the field renewable energies.
Assessment/type of examination:	Max. 2 hrs written exam or 30 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Lecture script, transparencies, blackboard, electronic media, presentation
Literature:	Acc. selected lectures

3rd Semester:

Module title:	**Mathematical Methods for Physics and Engineering III (5.04.638)**
Module code:	phy542
Course:	Mathematical Methods for Physics and Engineering III, lecture Mathematical Methods for Physics and Engineering III, exercise
Term:	Winter
Person in charge:	Prof. Dr. Hohmann
Lecturer:	Prof. Dr. Hohmann, Prof. Dr. Doclo
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 3rd semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Exercise: 2 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Contents of the lecture "Mathematical Methods for Physics and Engineering I and II"
Aim/learning outcomes:	To obtain advanced knowledge in application of mathematical methods to solve problems in physics and engineering
Content:	Complex analysis (derivatives, integration, Taylor and Laurent series, residue theorem) Fourier and Laplace transforms Ordinary differential equations Partial differential equations
Assessment/type of examination:	3 hrs written exam or 45 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, computer presentation
Literature:	K. F. Riley, M. P. Hobson, S. J. Bence: Mathematical methods for physics and engineering. Third edition, 2006

Module title:	**Atom- und Molekülphysik**
Module code:	phy030
Course:	Atom- und Molekülphysik, lecture Atom- und Molekülphysik, exercise
Term:	Winter
Person in charge:	Prof. Dr. Walter Neu
Lecturer:	Prof. Dr. M. Wollenhaupt
Language:	Deutsch
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 3rd semester Fach-Bachelor in Physik, Pflicht, 3rd Semester Zwei-Fächer-Bachelor in Physik, 3rd Semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week Exercise: 2 hrs/week
Workload:	Attendance: 84 hrs Self study: 96 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Courses in Experimental Physics I and II
Aim/learning outcomes:	Die Studierenden erhalten Kenntnisse über die grundlegenden Prinzipien der Atom- und Molekülphysik. Sie erlangen die Fertigkeit, durch Diskussion zentraler Schlüsselexperimente zwischen klassischen und quantenmechanischen Beschreibungen mikroskopischer Materie zu unterscheiden. Sie erwerben die Kompetenz zur Kombination von Kenntnissen aus der Experimentalphysik mit mathematischen und theoretischen Fertigkeiten, um Phänomene der mikroskopischen Physik zu deuten und qualitativ bzw. quantitativ zu beschreiben. Außerdem erlangen sie Kompetenzen zur gesellschaftspolitischen Einordnung der Konsequenzen von physikalischer Forschung.
Content:	Aufbau des Atoms; Photonen; Spektroskopische Methoden; Welleneigenschaften von Teilchen; Schrödinger-Gleichung, gebundene und ungebundene Zustände; Wasserstoffatom; Atome mit mehreren Elektronen; Atome in externen Feldern; Übergangswahrscheinlichkeiten, Absorption und Emission; Laser; Molekülbindung, Rotation und Schwingung von Molekülen; Molekülspektren, Auswahlregeln für Übergänge; ESR und NMR.
Assessment/type of examination:	45 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Lecture script, transparencies, blackboard, electronic media, presentation, lecture demonstrations
Literature:	W. Demtröder: Atoms, Molecules and Photons. Springer; 2nd ed., 2010 H. Haken, H. C. Wolf: The Physics of Atoms and Quanta: Introduction to Experiments and Theory. Module title:	**Lab Project I (5.04.637)**
Module code:	phy505
Course:	Laboratory Project I Design Fundamentals
Term:	Winter
Person in charge:	Prof. Dr. Brückner
Lecturer:	Prof. Dr. Brückner, Dr. Schüning
Language:	English
Location	Emden
Curriculum allocation:	Bachelor Engineering Physics, 3rd semester
Teaching Methods/ semester periods per week:	Laboratory: 3 hrs/week Lecture: 2 hrs/week
Workload:	Attendance: 70 hrs Self-study: 200 hrs
Credit points:	9
Prerequisites acc. syllabus	Lecture "Electronics"
Recommended prerequisites:	Basic laboratory course I & II
Aim/learning outcomes:	*Laboratory:* Knowledge and experience about experimental work, managing experimental work and evaluating results. *Design Fundamentals:* Achieving basic knowledge in reading, understanding and production of technical drawings, getting and overview about the features of CAD-Software, knowing about the basic principles of designing and dimensioning of machine elements.
Content:	*Laboratory:* Experiments in the field of electronics and measurement technique *Design Fundamentals:* Rules and Standards for Technical Drawings, Design Phases: • Functional requirements, performance specifications • Design methodology • Decision processes • Detailing • Manufacturing Drawings • Grouping of parts Basic Machine Elements: • Frames • Joints • Bearings • Sealing
Assessment/type of examination:	Report and project presentation; assignment (Design Fundamentals)
Media:	
Literature:	*Laboratory:* Specific project descriptions *Design Fundamentals:* ISO- and EN- Standards, Childs: Mechanical Design, Ulrich/Eppinger: Product Design and Development, Matousek: Engineering Design

Module title:	**Computing C/(C++) - PB (5.04.255)**
Module code:	pb262
Course:	Programming Course C++
Term:	Winter
Person in charge:	Dr. Stefan Harfst
Lecturer:	Dr. Stefan Harfst
Language:	English
Location	Oldenburg
Curriculum allocation:	o Bachelor Engineering Physics, 3st semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Exercise: 2 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs (excersises)
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	basic knowledge in undergraduate physics and mathematics basic computer knowledge
Aim/learning outcomes:	- learning of the programming language C++ and understanding of basic concepts of programming - finding and correcting programming errors - development of computer programs and organization of complex projects - working with software libraries independent analysis of scientific problems and their implementation in C++
Content:	Linux basics, the C++ programming language (e.g. data types, loops, functions, classes, templates), compiler (function, process), OpenSource tools (e.g. make, gnuplot), implementation of numerical algorithms as application examples
Assessment/type of examination:	weekly practical exercises (programming exercise)
Media:	transparencies, blackboard, computer presentation
Literature:	- Stanley Lippman, JoséeLajoie, and Barbara E. Moo : C++ Primer (5th edition, updated for C++11) - Bjarne Stroustrup : Programming: Principles and Practice Using C++ (2nd edition, updated for C++11/C++14) - Scott Meyers : Effective C++ - Breymann, Ulrich: C++ : Einführung und professionelle Programmierung, Carl Hanser Verlag, 2007, ISBN 978-3446410237 - Wolf, Jürgen: Grundkurs C++, Galileo Computing, 2013,ISBN 978-3836222945 Press, William H.: Numerical recipes : the art of scientific computing, Cambridge Univ. Press, 2007, ISBN 978-0521884075

Module title:	**Computing (Matlab) - PB (5.04.256)**
Module code:	pb262
Course:	Computing (Matlab)
Term:	Winter
Person in charge:	Schellenberg
Lecturer:	Schellenberg
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 3nd semester, Professionalisation
Teaching Methods/ semester periods per week:	Lecture: 3 hrs/week Exercise: 2 hrs/week
Workload:	Attendance 70 hrs Self study: 110 hrs
Credit points:	6
Prerequisites acc. syllabus	Basic computer knowledge; knowledge in undergraduate physics
Recommended prerequisites:	Mechanics
Aim/learning outcomes:	Students acquire knowledge of the most important ideas and methods of computer science including one programming language.
Content:	General fundamentals of computer systems Input/output Numbers, characters, arrays, strings Algorithms Programming language (Matlab) Functions (procedural programming) Programme files (modular programming) Introduction to object orientated programming Introduction to GUI programming
Assessment/type of examination:	Graded programming exercises (Fachpraktische Übung) / homework / 30 mins oral exam
Media:	Transparencies, blackboard, data projector presentation, reference programs
Literature:	MATLAB und Simulink in der Ingenieurpraxis : Modellbildung, Berechnung und Simulation by Wolf Dieter Pietruszka; MATLAB: An Introduction with Applications by Amos Gilat Essential MATLAB for Engineers and Scientists by Brian Hahn and Daniel Valentine;

4th Semester:

Module title:	**Numerische Methoden der Physik (5.04.241)**	
Module code:	phy150	
Course:	Numerical methods, lecture Numerical methods, tutorial	
Term:	Summer	
Person in charge:	Prof. Hartmann, Prof. Dr. Hohmann	
Lecturer:	Prof. Hartmann, Prof. Dr.Hohmann, Dr. Brand, PD Dr. Polley	
Language:	Lecture: German; Tutorials: English and German; Materials and script: English)	
Location	Oldenburg	
Curriculum allocation:	Bachelor Engineering Physics, 4th semester Fach-Bachelor in Physik, Pflicht, 4th Semester Master Hörtechnik und Audiologie	
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Tutorial: 2 hrs/week	
Workload:	Attendance: 56 hrs Self study: 124hrs	
Credit points:	6	
Prerequisites acc. syllabus		
Recommended prerequisites:	Grundlegende Computerkenntnisse, Kenntnisse aus dem Grundstudium Physik	Basic computer knowledge; knowledge in undergraduate physics
Aim/learning outcomes:	Die Studierenden erlangen theoretische Kenntnisse der grundlegenden numerischen Methoden sowie praktische Fertigkeiten zur Anwendung dieser theoretischen Kenntnisse zur Modellierung und Simulation physikalischer Phänomene aus allen Bereichen der experimentellen, theoretischen und angewandten Physik.	Students acquire theoretical knowledge of basic numerical methods and practical skills to apply these methods on physical problems within all areas of experimental, theoretical and applied physics.
Content:	Grundlegende Konzepte der numerischen Mathematik werden eingeführt und auf physikalische Probleme angewandt. Folgende Themen werden behandelt: Endliche Zahlendarstellung und numerische Fehler, grundlegende numerische Methoden (Differentiation und Integration, lineare und nichtlineare Gleichungssysteme, Funktionenminimierung,	Basic concepts of numerical mathematics are introduced and applied to physics problems. Topics include: Finite number representation and numerical errors linear and nonlinear systems of equations numerical differentiation and integration function minimization and model fitting discrete Fourier analysis ordinary and partial

	Modellierung von Messdaten, diskrete Fouriertransformation, gewöhnliche und partielle Differentialgleichungen, sowie weitere grundlegende Methoden). In der Übung werden die in der Vorlesung erlernten numerischen Methoden teilweise selbst implementiert (programmiert) und auf physikalische Problemstellungen aus Mechanik, Elektrodynamik etc. angewandt. Dazu werden C und Matlab als Programmierumgebung verwendet. Die Probleme sind in vielen Fällen so gewählt, dass für bestimmte Grenzfälle analytische Lösungen existieren, so dass die Qualität der numerischen Methoden anhand eines Vergleichs von numerischen und analytischen Lösungen beurteilt werden kann.	differential equations. The learned numerical methods will be partly implemented (programmed) and applied to basic problems from mechanics, electrodynamics, etc. in the exercises. The problems are chosen so that analytical solutions are available in most cases. In this way, the quality of the numerical methods can be assessed by comparing numerical and analytical solutions. Programming will be done in C or in Matlab, which is a powerful package for numerical computing. Matlab offers easy, portable programming, comfortable visualization tools and already implements most of the numerical methods introduced in this course. These built-in functions can be compared to own implementations or used in the exercises in some cases when own implementations are too costly. An introduction to C or Matlab will be given at the beginning of the tutorial.
Assessment/type of examination:	Weekly graded programming exercises	
Media:	Lecture script, transparencies, blackboard, data projector presentation, reference programs

Module title:	**Thermodynamik und Einführung in die Statistische Physik (5.04.201)**
Module code:	phy041
Course:	Thermodynamics and Statistics, lecture Thermodynamics and Statistics, exercise
Term:	Summer
Person in charge:	Prof. Peinke
Lecturer:	Prof. Peinke, (Neuberufung W2 Experimentalphysik)
Language:	German
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 4th semester Fach-Bachelor in Physik, Pflicht, 4th Semester Zwei-Fächer-Bachelor in Physik, LA Gymnasium, Pflicht, 4th Semester Zwei-Fächer-Bachelor in Physik, LA GHR, Pflicht, 4th Semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week Exercise: 2 hrs/week
Workload:	attendance: 84 hrs self study: 96 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	courses experimental physics 1, 2, 3
Aim/learning outcomes:	Die Studierenden erlernen die grundlegenden Prinzipien der phänomenologischen Thermodynamik einschließlich der Anwendungen auf dem Gebiet der Maschinen, sowie der mikroskopischen Thermodynamik und Statistik. Die Grundprinzipien werden auch anhand von Schlüsselexperimenten vermittelt. Die Veranstaltung bereitet auch den Besuch des Moduls Theoretische Physik III (Thermodynamik/Statistik) vor.
Content:	Thermodynamische Zustandsgrößen, Hauptsätze der Thermody- namik, ideale und reale Gase, Potentialfunktionen aus der Legen- dre-Transformation, irreversible Zustandsänderungen, Kreispro- zesse, Aggregatzustände, offene Systeme und Phasenübergänge, Wärmeleitung und Diffusion, statistische Ansätze für Gleichvertei- lung im Volumen, Entropieänderungen, kinetische Gastheorie, Boltzmann-, Fermi-Dirac- und Bose-Einstein-Statistik, Maxwell Verteilung, Planckscher Strahler, Zustandsänderungen in Quantensystemen.
Assessment/type of examination:	2 hrs written exam or 45 min oral exam, Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, beamer presentation, experiments.
Literature:	1. W. Demtröder: Experimentalphysik, Band 3: Atome, Moleküle, Festkörper. Springer, Berlin 2. St. J. Blundell, K. M. Blundell: Concepts in Thermal Physics, Oxford University Press, Oxford 3. M. W. Zemansky, R. H. Dittman: Heat and Thermodynamics. McGraw-Hill, New York

Module title:	**Physikalische Messtechnik (5.04.232 & 5.04.233)**
Module code:	phy530
Course:	Signalverarbeitung,lecture Physikalische Messtechnik, lecture Signalverarbeitung / Physikalische Messtechnik, excercise
Term:	Summer
Person in charge:	Prof. Dr. Dr. Kollmeier
Lecturer:	Prof. Dr. Dr. Kollmeier, Dr. Meyer, Prof. Dr. Jürgens
Language:	German
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 4th semester Fach-Bachelor in Physik, Pflicht, 4th Semester
Teaching Methods/ semester periods per week:	Lecture: 3 hrs/week Exercise: 1 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	Den Studierenden werden grundlegende Prinzipien der Messtechnik und Signalverarbeitung sowie der Anwendung komplexer Messverfahren zur Extraktion der Messinformation vermittelt. Sie erlangen Fertigkeiten zur Durchführung fortgeschrittener Praktika und experimenteller Arbeiten in Forschungslabors. Sie entwickeln die Kompetenz zum analytischen Denken bei der Bewertung von Messsituationen, die sie zur Lösung von Messproblemen befähigen, wie sie in unterschiedlichen Branchen der Industrie anzutreffen sind (z.B. Automobil- und Halbleiterindustrie; analytische, pharmazeutische und medizinische Industrie).
Content:	**SE Physikalische Messtechnik:** Sensoren zur Messung unterschiedlicher physikalischer Größen (z.B. Kraft, Temperatur, Ladung, elektrische und magnetische Felder, Energien von Teilchen und Strahlung), hoch aufgelöste Messungen kleiner Signale, Einfluss von Störsignalen, Linearisierung und Reduktion von Störgrößen durch Kompensationsmethoden, Rauschreduktion, phasensensitiver Detektor (Lock-In), Komplexe Messsysteme wie z.B. Kernresonanz, Elektronenresonanz, Lasermesstechnik (u.a. Pump/Probe-Systeme), räumlich aufgelöste Messmethoden wie z.B. Kernspintomographie, Elektronen- und Rastersondenmikroskopie. **VL Signalverarbeitung:** Charakterisierung und Bearbeitung von Messsignalen (lineare Sig- nalanalyse, Filterung), Charakterisierung und Beseitigung von Störeinflüssen (empirische Statistik, Rauschen in physikalischen Systemen, Korrelationsanalyse, phasensensitiver Verstärker, Methoden der Mittelung), Signaldigitalisierung, digitale Signalverarbeitung (u.a. zeitvariante Filterung, komplexe Verarbeitungsalgorithmen)
Assessment/type of	1 1/2 hrs written exam or 45 min oral exam

examination:	(Signalverarbeitung) and assignment (Phys. Messtechnik). Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, Beamer presentation, experiments.

Lüke: Signalübertragung. Springer, Berlin B. Kollmeier: Skript zur Signalverarbeitung und Messtechnik: http://medi.uni-oldenburg.de/16750.html

Module title:	**Quantum Structure of Matter (5.04.471)**
Module code:	phy551
Course:	Quantum Structure of Matter
Term:	Winter
Person in charge:	Prof. Lienau
Lecturer:	Dr. Svend-Age Biehs
Language:	English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 4st semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week (including excercises)
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Mechanics, Electrodynamics and Optics, Atomic and Molecular Physics, Mathematical Methods for Physics and Engineering I-III. These courses are mandatory prerequisites.
Aim/learning outcomes:	The students will gain knowledge of the fundamental principles of quantum mechanics and their application to the modelling of the equilibrium structure of different atomic, molecular and solid state material systems. The course will enhance their competence to understand and apply basic theoretical concepts in quantum mechanics. The students will learn how to rationalize quantum effects and wave phenomena in a variety of material systems and will become acquainted with strategies how to explain the equilibrium steady-state structure of different types of matter. The students will also be introduced into the nonequilibrium dynamics of selected quantum systems.
Content:	The course aims at providing a modern introduction into quantum mechanical foundations of the structure of atomic, molecular and solid state systems. It will bridge the gap between „Atomic and Molecular Physics" and „Solid State Physics." The following content will be covered: 1. Introduction into quantum mechanics 2. Quantum theory: techniques and applications 3. Atomic and molecular structure 4. Light-matter interaction 5. Molecular spectroscopy 6. Introduction into quantum dynamics 7. Molecular reaction dynamics 8. Macromolecules and Aggregates 9. Solid State Materials The course will be held at the level of an advanced course in physical chemistry and requires basic knowledge of quantum mechanics as introduced in "Atomic and Molecular Physics".
Assessment/type of examination:	Max. 3 hrs written exam or 30 min oral exam. Here, you will find information about the consideration of bonus points for module marks.

Media:	Script, transparencies, blackboard, computer presentation

Module title:	**Specialization I - PB**
Module code:	pb268
Course:	Specialization
Term:	Summer or Winter
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Doclo, Prof. Neu, Prof. Kühn
Language:	Deutsch / English
Location	Oldenburg
Curriculum allocation:	Engineering Physics, 4th semester, Compulsory optional
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	Knowledge of the current state of research in the field of specialization and acquisition of specialist knowledge
Content:	Familiarization of the specific area of specialization in which the thesis will be written. Introduction into special problems of selected areas of physics and current publications **Please see lectures under Subjects of Specialization, page 39ff.**
Assessment/type of examination:	Max. 3 hrs written exam or 30 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Acc. selected lectures: Lecture script, transparencies, blackboard, electronic media, presentation
Literature:	Acc. selected lectures

5th Semester:

Module title:	**Regelungstechnik (2.01.209)**
Module code:	phy590
Course:	Regelungstechnik
Term:	Winter
Person in charge:	Prof. Dr. Andreas Hein
Lecturer:	Prof. Dr. Andreas Hein
Language:	Deutsch
Location	Oldenburg
Curriculum allocation:	BA Engineering Physics, 5th semester
Teaching Methods/ semester periods per week:	lecture: 4 hrs/week exercises: 1 hrs/week
Workload:	Attendance: 70 hrs Self study: 110 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Komplexe Zahlen, normale Differentialgleichungen, Laplace Transformation
Aim/learning outcomes:	Die Studierenden • verfügen über Grundverständnis der Ansätze zur Steuerung und Regelung von technischen Systemen, • verstehen die Grundkonzepte der Modellierung von Systemen und deren Kopplung mit Reglern, • kennen die Methoden zur Bestimmung von Qualitätsmerkmalen von geregelten Systemen. Sie sind in der Lage • die Modellierung von technischen Systemen mit Hilfe von Differenzialgleichungen und deren Umsetzung in Übertragungsfunktionen durchzuführen, • Reglerstrukturen zu entwerfen, deren Stabilität zu prüfen und optimale Parameter der Regler zu bestimmen. Absolventen des Moduls haben die Kompetenz • sich in spezifische Fragen der Entwicklung von geregelten Systemen schnell einzuarbeiten, • Lösungsansätze zu präsentieren, die technischen Herausforderung zu erkennen und durch Kommunikation mit anderen Disziplinen darauf zu reagieren.
Content:	Das Modul vermittelt die folgenden Inhalte: • Grundbegriffe • Analoge Übertragungsglieder: o Lineare zeitinvariante (LZI-) Glieder

	o Wirkungspläne o Simulation und Modellbildung o Testsignalantworten o Frequenzgang o Differentialgleichungen und Übertragungsfunktion o Stabilität • Regelstreckenarten • Reglerarten • Lineare Regelkreise: Führungs- und Störverhalten • Stabilitätskriterien • Klassische Methoden der Analyse und Synthese: o Realisierung Computergestützte Regelung MATLAB/Simulink
Assessment/type of examination:	1 h written exam or 30 min oral exam. Here, you will find information about the consideration of bonus points for module marks.
Media:	Blackboard, transparents and beamer projections, electronic hand-outs
Literature:	Lutz, H. und Wendt, W.: Taschenbuch der Regelungstechnik Unbehauen, H.: Regelungstechnik I, Klassische Verfahren zur Analyse und Synthese linearer kontinuierlicher Regelsysteme

Module title:	**Festkörperphysik (5.04.301)**
Module code:	Phy050, AM14
Course:	Festkörperphysik
Term:	Winter
Person in charge:	apl. Prof. Dr. A. Kittel
Lecturer:	apl. Prof. Dr. A. Kittel, Prof. Dr. N. Nilius, Dr. H. Borchert
Language:	German
Location	Oldenburg
Curriculum allocation:	Fach-Bachelor in Physik, 5. Semester Master Engineering Physics, 1. Semester
Teaching Methods/ semester periods per week:	Lecture 4 hrs/week Exercises 2 hrs/week
Workload:	Attendance: 84 hrs Self-study: 96 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Experimentalphysik I-IV, Theoretische Physik I und II
Aim/learning outcomes:	Die Studierenden erwerben Kenntnisse über Phänomene der Festkörperphysik und ausgewählter Spezialgebiete (Halbleiterphysik, Photovoltaik, Tieftemperaturphysik, Supraleitung). Sie erlangen Fertigkeiten zur Anwendung grundlegender Methoden und Prinzipien der Beschreibung von Festkörperphänomenen (Symmetrien, reziproker Raum, Modenspektren, Bloch Gleichungen, Wechselwirkungen, Extrembetrachtungen wie starke und schwache Elektronenbindung,makroskopische Quantenphänomene, Beschreibung der Störung der periodischen Gitterstruktur). Sie erwerben Kompetenzen zur Erfassung der Funktion von technisch relevanten Bauteilen, zur vertiefenden Einarbeitung in weitergehende Bereiche und zur Entwicklung neuartiger Bauelemente aufgrund des erlernten Wissens. Außerdem erlangen sie Kompetenzen zur gesellschaftspolitischen Einordnung der Konsequenzen von physikalischer Forschung .
Content:	Kristallstrukturen und Symmetrien, Bravais-Gitter, Translationssymmetrie und reziprokes Gitter, Brillouin-Zone, Bindungstypen und -energien (kovalente, ionische, van der Waals, metallische und Wasserstoffbrücken-Bindung), Dynamik der Kristallgitter, Phononen, nichtlineare und anharmonische Effekte, spez. Wärme, Wärmeleitung und Umklapp-Prozesse, Elektronen in Festkörpern, quasifreies Elektronengas, Zustandsdichten und Ferminiveau, Transportgleichung, Elektronen im periodischen Potential, Blochtheorem, Bänderschema, effektive Masse, Zustandsdichten und Besetzung, Metalle/Isolatoren, Grundlagen der Halbleiter, dielektrische Eigenschaften, komplexe Brechungsindices für Metalle und Isolatoren, 1-Oszillatormodell, Kramers-Kronig-Relation, lokales Feld, Meta-Materialien, Grundlagen der Supraleitung, magnetische Eigenschaften, Dia-, Para-, Ferromagnetismus, Austauschwechselwirkung, Spinwellen, Spingläser
Assessment/type of	2-stündige Klausur oder mündliche Prüfung von maximal

examination:	45 min. Dauer. Informationen zur Berücksichtigung von Bonuspunkten bei der Modulbenotung finden Sie hier.
Media:	Tafel, Folien, Beamerpräsentationen
Literature:	1. N. W. Ashcroft, N. D. Mermin: Solid State Physics. Sounders College, Philadelphia, BIS 2. N. W. Ashcroft, N. D. Mermin: Festkörperphysik. Oldenbourg, München, BIS 3. S. Module title:	**Werkstoffkunde (5.04.609)**
Module code:	phy581
Course:	Werkstoffkunde, Materials Science, lecture
Term:	Winter
Person in charge:	Prof. Dr. T. Schüning
Lecturer:	Prof. Dr. T. Schüning
Language:	Deutsch / English depending on demand
Location	Emden
Curriculum allocation:	Bachelor Engineering Physics, 5th semester
Teaching Methods/ semester periods per week:	Lecture 4 hrs/week with integrated exercises
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Knowledge of the fundamental physical laws; poised use of the mathematical methods of physics Lecture "Atomic Physics"
Aim/learning outcomes:	The students are able - outgoing from the microscopic structure of engineering materials - to understand its macroscopic properties, so that they are able to involve the behaviour of engineering materials into engineering requirements independently

Content:	Introduction
	Classification of engineering materials in groups
	Constitution of engineering materials (microscopic structure, macroscopic properties)
	Physical basics of constitution:
	   Constitution of single phase solids (crystals, amorphous materials, real materials)
	   Constitution of multi-phase materials
	   Basic diagrams of constitution of binary alloys
	Crystallisation
	Diffusion
	Properties of materials
	   Physical properties
	   Mechanical properties (plastic deformation, crack growth, friction, wear)
	Groups of materials (metals, ceramics, polymers)
	Selected materials (iron, aluminium, copper)
	Testing of materials (an overview of methods)

Assessment/type of examination:	1 hr written examination or 30 min oral exam
Media:	Blackboard, transparents and beamer projections, electronic hand-outs
Literature:	E. Hornbogen: Werkstoffe, Springer Verlag Berlin u. a. W. Bergmann: Werkstofftechnik Teil 1, Grundlagen; Carl Hanser Verlag München Wien Bargel, Schulze: Werkstoffkunde, VDI-Springer W. Literature:	Acc. selected lectures

Module title:	**Laboratory Project II – PB**
Module code:	pb271
Course:	Laboratory Project II
Term:	Winter
Person in charge:	Prof. Dr. Neu
Lecturer:	Profs. Photonik, Prof. Doclo, Prof. Kühn, Prof. Poppe
Language:	Deutsch / English depending on demand
Location	Emden
Curriculum allocation:	Bachelor Engineering Physics, 5th semester
Teaching Methods/ semester periods per week:	Laboratory: 5 hrs/week
Workload:	Attendance: 70 hrs Self study: 110 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Basic laboratory course I & II; Lab project I
Aim/learning outcomes:	The students are enabled to systematically explore and structure a given project task. These projects are settled in the field of current research and are worked on in a team. This requires as well project scheduling, definition of milestones, specification and design, literature research, and presentation discussion of results. The students do not only gain technical and experimental experience but do also train soft-skills like team work, communication, presentation and management tasks
Content:	Projects close to current research projects
Assessment/type of examination:	Experimental work and laboratory reports or presentation or homework
Media:	Script, manuals, experiments.
Literature:	recent publications, as required

6th Semester:

Module title:	**Bachelor Thesis**
Module code:	bam
Course:	Bachelor Thesis
Term:	Summer
Person in charge:	Teaching Staff Engineering Physics
Lecturer:	N.A.
Language:	Deutsch / English
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 6th semester
Teaching Methods/ semester periods per week:	Seminar and self-learning
Workload:	Attendance: 28 hrs Self study: 422 hrs
Credit points:	15
Prerequisites acc. syllabus	Bachelor curriculum Engineering Physics
Recommended prerequisites:	
Aim/learning outcomes:	Students will apply their diversified scientific and professional skills to plan, prepare, organize and produce single-handed a research study.
Content:	The thesis comprises empirical, theoretical or experimental research and development according to the field of specialization
Assessment/type of examination:	Bachelor thesis and colloquium
Media:	as required
Literature:	as required

Module title:	**Praxismodul Engineering Physics**
Module code:	prx110
Course:	Internship & Seminar
Term:	Winter
Person in charge:	Dr. Koch
Lecturer:	Teaching staff of Engineering Physics
Language:	Deutsch / English depending on demand
Location	Oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 6th semester
Teaching Methods/ semester periods per week:	self-learning
Workload:	Attendance: 350 hrs Self study: 100 hrs
Credit points:	15
Prerequisites acc. syllabus	
Recommended prerequisites:	Physics I – IV; metrology
Aim/learning outcomes:	The student will be able to conduct, conceive, analyze, and journalize ambitious physical experiments. He/she will gather operating experience with modern measuring processes.
Content:	Practical assessment in research institute, industrial company, clinic, or university. The students learn to apply their theoretical knowledge in an industrial environment.
Assessment/type of examination:	Report (13 CP), poster presentation (2 KP)
Media:	as required
Literature:	as required, Edward Zanders, Lindsay MacLeod, Presentation Skills for Scientists with DVD-ROM, Cambridge University Press, 2010, ISBN-13: 978-052174103

Subjects of Specialization:

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Biomedizinische Physik und Neurophysik (SS, 5.04.317)**
Term:	Summer
Person in charge:	Prof. Dr. Brückner, Prof. Dr. Kühn, Prof. Dr. ir. Doclo
Lecturer:	Prof. Kollmeier, Prof. Poppe, Prof. Verhey, Dr. Uppenkamp
Language:	German
Location:	Oldenburg
Curriculum allocation:	Bachelor in Physik, 3.-6. Semester; Bachelor Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Exercises: 2 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Inorganic and organic chemistry, biology (in each case Abitur level), physics (Bachelor level); additionally, recommended: Practical course attempts from the progressing and/or block practical course from the areas acoustics and/or medical physics and/or signal processing
Aim/learning outcomes:	Students are expected to gain an overview of bio-medical physics. They shall understand the activities of physicists in medicine and be able to analyze current research topics of medical physics.
Content:	Medical bases: Anatomy and physiology of humans, sense and neuro physiology, Psychophysics, pathophysiology of select organ systems, pathology of select diseases, physics in the biomedicine: Methods of biophysics and neuro physics, Roentgen diagnostics, radiotherapy, nuclear medicine, tomography, the medical acoustics/ultrasonic, medical optics and laser applications, Audiology
Assessment/type of examination:	Successful attendance of the weekly exercises, 30 min. oral exam and presentation. Here, you will find information about the consideration of bonus points for module marks.
Media:	Script, transparencies, blackboard, Beamer presentation, experiments.

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Einführung in die Akustik (5.04.253) & Einführung in die Hörforschung (5.04.254)**
Term:	Winter
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. Van de Par, Prof. Dr. Dr. Kollmeier, Prof. Dr. Jürgens
Language:	German
Location	Oldenburg
Curriculum allocation:	Bachelor in Physik, 3.-6. Semester; Bachelor Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture + Exercises : 2 hrs/week (Akustik) Lecture: 2 hrs/week (Hörforschung)
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	3 & 3
Prerequisites acc. syllabus	
Recommended prerequisites:	Mandatory courses of the 1. and 2. semester
Aim/learning outcomes:	Nach Abschluss des Moduls haben die Studierenden die Kompetenz eine experimentelle Bachelorarbeit im Gebiet der Akustik oder der Medizinischen Physik / Hörforschung anzufertigen. Die Veranstaltung "Einführung in die Hörforschung" beinhaltet dabei die Aspekte der menschlichen Wahrnehmung und physiologischen Verarbeitung von Schall, während die Veranstaltung "Einführung in die Akustik" die technischen Aspekte der Schallerzeugung und Schallausbreitung behandelt.
Content:	*Akustik*: Physikalische Grundlagen der Akustik, Schwingungen und Wellen, Erzeugung, Abstrahlung und Ausbreitung von Schall, akustische Messtechnik, Schalldämmung und -dämpfung, Raum- und Bauakustik, Elektroakustik/ Wandler *Hörforschung*: Funktion, Störungen und objektive Diagnostik des Hörens, Psychophysik, Hörgeräte- und Cochlea-Implantat-Verarbeitung, aktuelle Hörforschung in Oldenburg mit Streifzügen durch die Labors
Assessment/type of examination:	Oral exam
Media:	Script, transparencies, blackboard, Beamer presentation, experiments.

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Einführung in die Photonik (5.04.331)**
Term:	Summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. Christoph Lienau, PD Dr. Ralf Vogelgesang
Language:	German
Location	Oldenburg
Curriculum allocation:	Fach-Bachelor in Physik, Wahl, 3. - 6. Semester Bachelor Engineering Physics, 4. / 5. Semester Master Engineering Physics, 1. – 3. Semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Experimentalphysik I bis V
Aim/learning outcomes:	Vermittlung von vertieften Kenntnissen im Bereich der Photonik und Vorbereitung auf eine Bachelor-Arbeit in diesem Gebiet. Erwerb von Fertigkeiten zur selbständigen Vertiefung von Wissen im Bereich Photonik sowie zur Konzeption fortgeschrittener Experimente zur Klärung physikalischer Fragestellungen. Erwerb von Kompetenzen zur wissenschaftlichen Analyse komplexer Sachverhalte und zur selbstständigen Einordnung neuer Forschungsergebnisse sowie zur gesellschaftpolitischen Einordnung der Konsequenzen von physikalischer Forschung.
Content:	Licht und Materie (Grundlagen der Elektrodynamik, Maxwell Gleichungen, Materie Gleichungen) Fourier Representationen (Summen & Integrale, Lineare Systeme, Faltung) Optische Medien (Dispersion, Absorption, Pulspropagation, Dispersive Beiträge) Ebene Wellen an Grenzflächen (Fresnelgleichungen, Reflexion, Brechung, Evaneszente Wellen) Spiegel und Strahlteiler (Matrixformalismus, Strahlteiler, Resonatoren, Interferometer) Geometrische Optik (paraxiale Strahlenoptik, ABCD Matrizen, Resonatortypen, Abbildungssysteme) Wellenoptik (paraxiale Wellenoptik, Gauß'sche Strahlen, Skalare Beugungstheorie, Fresnel- und Fraunhofer Beugung) Kohärenz (Korrelationsfunktion, Kohärenzinterferometrie) Photonenoptik (Eigenschaften einzelner Photonen, Statistik von Photonenflüssen) Polarisationsoptik (Polarisationszustände, Jones und Stokes Formalismus, anisotrope Materialien) Fourier Optik (Holographie, Bildverarbeitung im reziproken Raum, Tomography) Photonische Kristalle (Schichtmedien, 2- und 3-dimensionale Kristalle, Blochmoden, Dispersion) Wellenleiteroptik (Moden, Dispersionsrelation,

	Feldverteilungen) Faseroptik (Stufen und Gradientenindexfasern, Dispersion und Dämpfung)
Assessment/type of examination:	90-minütige Klausur, mündliche Prüfung von max. 30 min. Dauer, Hausarbeit, oder mündlicher Vortrag.
Media:	Tafelaufschrieb, Overheadfolien zur Illustrativen Ergänzung

Term:	Summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. B. Poppe
Language:	Deutsch
Location	oldenburg
Curriculum allocation:	Bachelor Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week
Workload:	Attendance: 28 hrs Self study: 62 hrs
Credit points:	3
Prerequisites acc. syllabus	
Recommended prerequisites:	
Aim/learning outcomes:	Die Studierenden erwerben Kenntnisse über die grundlegenden Prinzipien und messtechnischen Methoden der Kern- und Ele-mentarteilchenphysik sowie der dazugehörigen theoretischen Modelle (Feldtheorien). Sie erlangen Fertigkeiten zur Analyse kern- und teilchenphysikalischer Probleme, zur Einordnung neuer Experimente und Publikationen sowie zur selbständigen Beurtei-lung neuerer Entwicklungen. Sie erwerben Kompetenzen zur fun-dierten Einordnung der neuen Entwicklungen im Bereich der Kern- und Elementarteilchenphysik sowie zur Vernetzung mit den Kennt-nissen aus den bisherigen Vorlesungen zur Experimental- und theoretischen Physik. Außerdem erlangen sie Kompetenzen zur gesellschaftspolitischen Einordnung der Konsequenzen von physi-kalischer Forschung.
Content:	Phänomenologie der Kerne und Kernmodelle, Kernstrahlung, Teil-chendetektoren, Beschleunigungsprinzipien, Teilchenzoo, Stan-dardmodell der Elementarteilchenphysik, Einführung in die Physik jenseits des Standardmodells (GUT und Superstringtheorien). Stu-dierende, die einen tiefergehenden Einblick in die Materie erwerben möchten, wird zusätzlich der Besuch der Vorlesung "Einführung in die Astrophysik" empfohlen. Aufgrund der hohen Dynamik der For-schungsergebnisse in beiden Bereichen wird in der Vorlesung mehrfach ein Überblick über neuere Publikationen gegeben.
Assessment/type of examination:	Klausur von max. 60 Minuten Dauer oder mündliche Prüfung von max. 45 Minuten Dauer.
Media:	Beamerpräsentation, historische Originalpublikationen, Audio-Files und kurze Filme.
Literature:	• Jörn Bleck-Neuhaus, Elementare Teilchen, Springer Verlag, BIS • Wolfgang Demtröder, Experimentalphysik IV, Kern-, Teilchen und Astrophysik, Springer Verlag, BIS • Das & Ferbel, Introduction to Nuclear and Particle Physics World, Scientific, BIS

	• Historisch wichtige Original-Publikationen • Ggf. aktuelle Publikationen aus dem Physik Journal, Physics Today etc.

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Einführung und Grundlagen zur Materialbearbeitung (5.04.706)**
Term:	Winter
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Dr.-Ing. Thomas Schüning
Language:	German
Location	Emden
Curriculum allocation:	Bachelor Engineering Physics, 4th semester
Teaching Methods/ semester periods per week:	Lecture: 4 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Knowledge in physics, optics, production engineering
Aim/learning outcomes:	Fundamental knowledge of the characteristics of the laser beam, Knowledge of laser sources for industrial applications, knowledge of procedures of the material processing with laser beams. Knowledge of the physical-technical procedures of the individual manufacturing processes with laser beams; Ability for the estimation of favorable working parameters; The participants should be able to understand the procedures of the material processing with laser beams and evaluate the tasks of manufacturing
Content:	Overview of the procedures of the material processing with laser beams: Procedure, allocation of the procedures in relation to production engineering the laser beam as tool. Deepening treatment of the manufacturing processes with laser beams in relation of quality, speed and costs. The manufacturing processes are: Cutting procedure, joining process, surface processing, material property changing, generative process. • Examples from the industrial manufacturing.
Assessment/type of examination:	2 hr written final examination
Media:	Blackboard, transparencies, beamer presentation
Literature:	Script H. Hügel: Strahlwerkzeug Laser, Teubner Studienbücher Materialbearbeitung mit dem Laserstrahl im Geräte- und Maschinenbau, VDI-Verlag Hügel, Helmut: Laser in der Fertigung, Vieweg + Teubner Verlag

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Lasers in Medicine I (Lasers in Medicine) (5.04.666)**
Term:	Summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. Neu
Language:	English
Location	Emden
Curriculum allocation:	Pflicht: Photonik (BA) Bachelor Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week
Workload:	Attendance: 28 hrs Self study: 62 hrs
Credit points:	3
Prerequisites acc. syllabus	
Recommended prerequisites:	Laser physics, Technical Optics
Aim/learning outcomes:	The students are enabled to understand basic laser biotissue interaction processes based on the knowledge of optical and thermal properties of biotissue. The students are able to describe the principle function of a laser, distinguish between the different laser types and designs regarding medical laser systems. The students have a basic knowledge on beam guiding techniques, medical applicators, and safety requirements. The students gain an overview on lasers in medicine and a first insight into clinical laser applications via an excursion to a clinic.
Content:	Optical and thermal properties of biotissue Basic interaction processes of light and biotissue Medical laser systems Beam guiding and applicators Introduction to lasers in medicine Laser safety and regulatory affairs in medicine Insight into clinical laser therapy (Excursion)
Assessment/type of examination:	Max. 2 hrs written exam or 30 min oral exam or presentation. Here, you will find information about the consideration of bonus points for module marks.
Media:	Lecture script, transparencies, blackboard, electronic media, presentation
Literature:	Berlien, Hans-Peter; Müller, Gerhard J., Breuer, H.; Krasner, N.; Okunata, T.; Sliney, D. (Eds.): Applied Laser Medicine. Springer-Verlag, 2003. ISBN: 978-3540978565.

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Lasers in Medicine II (Advanced Lasers in Medicine) (5.04.641a)**
Term:	Winter
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. Neu
Language:	English
Location	Emden
Curriculum allocation:	Photonik (BA) , Bachelor Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week
Workload:	Attendance: 28 hrs Self study: 62 hrs
Credit points:	3
Prerequisites acc. syllabus	
Recommended prerequisites:	Laser physics, Technical Optics, Lasers in medicine I
Aim/learning outcomes:	The students are able to analyze and model in depth optical properties of biotissue. They can explain laser-tissue interaction in depth. The students are able to design and evaluate medical laser systems and assign specific therapeutical areas. Special emphasis is put into dosimetry and minimal invasive techniques. An excursion to a university clinic enables the students to transfer the acquired course knowledge to practical experience.
Content:	Light propagation in biotissue Optical diagnostics and imaging, simulation, computer modelling Photochemical, photothermal, photomechanical interaction mechanisms Minimal invasive surgical therapies Medical laser applications Lasers in clinical diagnostics Dosimetry Excursion to a clinic; clinical laser applications
Assessment/type of examination:	Max. 2 hrs written exam or 30 min oral exam or presentation. Here, you will find information about the consideration of bonus points for module marks.
Media:	Lecture script, transparencies, blackboard, electronic media, presentation

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Science of Imaging, Scientific Sensors and Photography (5.04.672)**
Term:	Winter or Summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Dr. Ulrich Teubner, Prof. Dr. Hans-Josef Brückner
Language:	Deutsch / English depending on demand
Location	Emden
Curriculum allocation:	Bachelor of Engineering Physics, 4th or 5th semester
Teaching Methods/ semester periods per week:	Lecture: 2 hrs/week Laboratory: 2 hrs/week
Workload:	Attendance: 56 hrs Self study: 124 hrs
Credit points:	6
Prerequisites acc. syllabus	
Recommended prerequisites:	Basics of optics, electrodynamics, electronics
Aim/learning outcomes:	Imaging and detectors are of major importance everywhere in science and engineering. This course provides substantial background of the relevant physics and engineering methods. As a practical application, many aspects are explained within physics of photography. In the extended laboratory part, using modern imaging systems such as professional cameras, students get experience.
Content:	Optical imaging, aberrations, ray tracing, cameras and lenses, exposure, resolution, space bandwidth product, imaging issues and limits, fourier optics, optical transfer function, modern sensors (CCD, CMOS, scientific sensors such as backside illum. XUV-CCD, MCP etc.) in detail, dynamic range and noise, imaging systems, basics of image processing
Assessment/type of examination:	experimental work and laboratory reports or max. 2hr written examination or max 1h oral examination or presentation or homework
Media:	blackboard, transparencies, computer presentation, practical work in laboratory

Module title:	Specialization I / II - PB
Module code:	pb268 / pb077
Course:	**Wind Energy Utilisation (5.04.341)**
Term:	Winter or Summer
Person in charge:	Prof. Doclo, Prof. Neu, Prof. Kühn
Lecturer:	Prof. Kühn, Andreas Schmidt
Language:	English
Location	Univ. Oldenburg
Curriculum allocation:	4th semster
Teaching Methods/ semester periods per week:	Lecture 4 contact hours/week
Workload:	180 hrs.
Credit points:	6
Prerequisites acc. syllabus	Basic computer knowledge; mechanics; mathematical methods for physics and engineering
Recommended prerequisites:	
Aim/learning outcomes:	Limit number of seats
Content:	Students who have attended »Wind Energy Utilisation« in the Bachelor phase should be able to directly enrol for advanced wind energy lectures in the Master phase (without attending 5.04.4061 – Wind Energy Physics).
Assessment/type of examination:	This lecture with exercises is intended as introduction into physics and engineering of wind energy utilisation. Nevertheless also social, historical and political aspects are regarded. The lecture gives a deeper understanding of physical effects, methods, calculations and parameters into the field of wind energy utilisation, wind physics and wind energy science. Experiments and exhibits are used to deliver deeper insights into the subjects of the lectures. The tutorial part consists of calculation exercises and an introduction into the common and professional software WindPro ® (subject to modifications). Content: • The wind: generation, occurence, measurement, profiles etc.; • Energy and power in the wind; • Drag driven converters; • Principle of lift driven converters; • Dimensionless parameters and characteristic diagrams of wind turbines; • Optimum twist and horizontal plan of the rotor blade; • Rotor power losses; • Power control; • Generator concepts and grid interaction; • Loads; • Mechanical design and components of a wind turbine; • Calculation of energy yield; • Economics; • Wind farms, wakes and wind farm efficiency; • Environmental effects; • Unconventional converters; • Prepared discussion about social and political aspects; • Use of wind farm calculation software WindPro
Media:	90 min. written exam, ca. 2 weeks after lectures' end
Literature:
