## Editorial

The Centre of European Law and Politics (ZERP – [www.zerp.eu](http://www.zerp.eu)) at the University of Bremen was established as a foundation by the Senate of the Free Hanseatic City of Bremen in 1982 to conduct interdisciplinary research on the law and politics of the European Union. Since January 2009, it has been a fully incorporated institute within the university's law department. ZERP owes its distinctive character to the combined focus on law and politics, integrating the fields of political, legal and sociological theory as well as international constitutional, economic and private law.

ZERP research activities are carried out within the departments of law, social and political science at the University of Bremen. In particular, it is one of the supporting institutions of the Bremen International Graduate School of Social Sciences and the Collaborative Research Center "Transformations of the State". ZERP is also involved in research projects with renowned foreign partner institutions, such as the European University Institute in Florence, the University of Helsinki, the Institute of European and Comparative Law at Oxford University, Sassari University and the Scuola S. Anna in Pisa.

ZERP publishes its own book series, which pursues an interdisciplinary approach to the issues of European law and politics in the post-national constellation. All publications in the ZERP series share this perception of the transnational conditions in law and politics. The aim is to re-establish interdisciplinary connections and to gain a socio-theoretically informed perspective on the emergence of new transnational orders, the normative benchmark being the ideal of a transnational constitutional law which is socially just, committed to human rights and environmental protection, and which addresses the fundamental issues of democratic and peaceful governance.
